

Woodside Priory is a religious residential high school located in Woodside, CA. Its cafeteria serves some 500 plates per day, yearly.

The old tank was well beyond its useful life (around 5-7 years in a commercial setting). It was also very inefficient. Woodside Priory contacted Tanknot Tankless, Inc. to assess the equipment and recommend an upgrade. Two Noritz NCC199's were installed with a capability of 600 gallons per hour of hot water. In addition, much of the piping which served the kitchen was re-piped from oversized 1-1/2" pipe down to 3/4" pipe, greatly reducing hot water delay, water waste and gas loss.
